Senior Platform Engineer — AI Infrastructure

Fictional sample for Job Search Workflow Community Edition

Professional Summary

Platform engineer with 6 years of experience building internal developer tools and infrastructure automation. Transitioning toward AI-assisted engineering workflows and LLM-powered developer productivity tooling.

Experience

Senior Platform Engineer <i>March 2023 – Present</i>	Nebula Systems <i>Berlin, Germany (Remote)</i>
• Own internal developer platform (Backstage-based) serving 80+ engineers across 12 teams • Manage 3 Kubernetes clusters (200+ services, 99.95% SLA) with GitOps (ArgoCD) • Architect CI/CD pipeline infrastructure (GitHub Actions), reducing build times 35% • Lead on-call rotation design, achieving shared 1-week-per-month sustainable cadence	
Platform Engineer <i>June 2020 – February 2023</i>	CloudForge Inc. <i>Munich, Germany</i>
• Reduced deployment time from 45min to 8min via GitOps migration (Flux + ArgoCD) • Built self-service infrastructure provisioning with Terraform modules (15+ reusable modules) • Led incident response for 3 P1 outages; MTTR reduced 40% through runbook automation • Implemented cost optimization initiative saving €18K/month on cloud spend	
Junior DevOps Engineer <i>September 2018 – May 2020</i>	DataStream GmbH <i>Munich, Germany</i>
• Automated monitoring setup (Prometheus + Grafana) for 50+ services • Migrated legacy deployment scripts to Helm charts (30+ services containerized) • Contributed to SLO definition and alerting strategy for core data pipeline	

Selected Projects

Developer Self-Service Portal	2024
• Designed a catalog workflow for service ownership, environment requests, and operational runbooks • Added policy checks that prevented incomplete production-readiness handoffs before deployment • Partnered with application teams to turn recurring support requests into reusable templates	

AI-Assisted Incident Review Prototype	2023
• Built a retrieval prototype that connected incident timelines, runbooks, and change records for operators • Added human review steps so generated summaries remained evidence-based and safe to correct • Measured repeated alert patterns and proposed small automation opportunities for follow-up work	

Leadership and Collaboration

• Mentored four engineers on incident response, practical observability, and sustainable on-call practices • Facilitated quarterly reliability reviews with product, security, and platform stakeholders • Wrote concise decision records for infrastructure trade-offs, ownership boundaries, and operational risks	
--	--

Technical Skills

Infrastructure:	Kubernetes (CKA), Terraform, ArgoCD, Helm, Docker, AWS, GCP
Observability:	Prometheus, Grafana, OpenTelemetry, PagerDuty
Languages:	Python, Go (basic), Bash, HCL
AI/ML:	LLM API integration, RAG prototypes, basic model serving (Ray)
Practices:	GitOps, IaC, SRE principles, incident management

Education

B.Sc. Computer Science	Technical University of Munich, 2018
------------------------	--------------------------------------

Certifications

• CKA (Certified Kubernetes Administrator) — CNCF — 2021 • AWS Solutions Architect Associate — 2020
